Executive Brief

Composable is the New Legacy

Emporix replaces fragile, overengineered stacks with intelligent operations. *You don't need more tools. You need systems that act.*

EMPORIX

Modern commerce is stuck between two broken promises.

Monoliths promised control – but killed flexibility

Centralized logic meant consistency, but also bottlenecks. Every change depended on IT. Every rollout took months. And every adaptation generates even more spaghetti code.

The Microservice Trap is killing your agility.

What started as "Composable freedom" has become architectural debt. Logic is scattered across microservices, APIs, glue code, and vendor integrations. Teams are stuck stitching it all together. Your commerce stack was meant to accelerate you – now it's slowing you down.

From building to autonomy. From tools to outcomes.

Emporix doesn't just sit on top of your stack – it reshapes how commerce runs. We decouple processes from legacy systems and make them governable, visible, and adaptable.

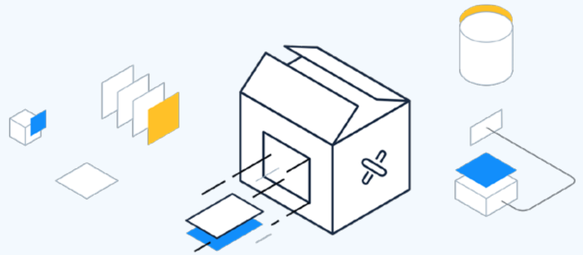
That's how you move from brittle integrations to orchestrated operations – and from road-map thinking to real-time execution. And it's how you lay the foundation for Autonomous Commerce – where smart agents trigger decisions, not tickets.

Business in Control: Business users configure processes visually – no developer bottlenecks, no ticket ping-pong.

Orchestrate, Don't Integrate: Value streams connect systems and actions end-to-end – no glue code, no chaos.

Autonomous Commerce: Smart agents trigger actions across your stack in real time – pricing, availability, approvals, and more.

Designed to Adapt: Plug into what exists. Evolve what works. Operate faster, without replatforming.



EMPORIX

You don’t need another tool. You need operational speed.

Emporix combines orchestration, automation, and composability – all in one architecture, built for enterprise agility.

1 Value Stream Modeller & Library
Orchestrate, Don’t Integrate

- Preconfigured, visually adaptable process templates
- Control end-to-end flows across systems and touchpoints
- No mapping hell. No glue code.

2 Embedded iPaaS
Designed to Adapt

- 2,000+ prebuilt connectors to existing systems
- Integrate fast, evolve continuously
- No replatforming required

3 Agentic Commerce Intelligence
Autonomous Commerce

- Preconfigured and custom AI agents
- Trigger real-time actions and decisions across your stack
- From automation to autonomy

4 Frontend Layer
Business in Control

- Journey-aware, open, and modular frontend layer
- Visual tools and business rules empower teams to act
- No replatforming required

In a volatile, complex world, resilience is everything. Emporix helps you adapt to shifting markets, customer needs, and internal demands – without code, and without IT delays. Speed doesn’t come from modularity. It comes from orchestration.

What customers typically achieve with Emporix

Challenge	With Emporix	Result
Manual approval workflows slow down quoting	Visual workflows with dynamic routing	80% faster quote time
Fragmented pricing and availability logic	Unified process logic across systems	Higher conversion, fewer errors
Frequent change requests overload IT	Business users adjust flows directly	Lower cost, faster adaptation

EMPORIX

Ready to escape the custom code trap?

Let’s explore how orchestration and intelligent agents can transform your operations:

» Book a Value Stream Workshop

» Explore customer use cases like HABA, ACR and LMT Tools
